Work Experience

YouTube, Google

Oct. 2025 – Present

Software Engineer

Mountain View, CA

- Built and owned end-to-end ML recommendation pipelines (**Python, Tensorflow/TFX, SQL**) for personalized creator recommendations in YouTube Studio, running daily batch inference across millions of channels.
- Designed a multi-label, multi-task deep learning model to predict creator membership growth, beating the heuristic baseline by **+28%** recall and **+23%** precision offline.
- Built a creator alert system with Trust & Safety team, creating a privacy-preserving data pipeline to serving, attribution, and A/B testing, with promising results: **16%** click-through rate and **5.7x** higher resolution among clicked creators.
- Built attribution and measurement pipelines, including incremental feeds that handle late-arriving data, to quantify restored creator revenue. Maintained **90%+** test coverage and automated release validation.

Amazon Web Services

Jul. 2025 – Sep. 2025

Software Dev Engineer

Seattle, WA

- Collaborated within a cross-functional team to engineer an automated launch platform for AWS Seller of Record (SoR) entities (**Java, Coral framework**), streamlining manual configuration workflows and enhancing deployment scalability.
- Established the foundational test infrastructure by authoring automated point-to-point (P2P) tests using **Cucumber** and the **Kepler** framework, securing core workflows and mitigating regression risks for future team releases.

Gyfr

Jul. 2024 – Jun. 2025

Software Engineer

Remote, US

- Engineered an AI-enhanced fitness web application using **React, Firebase**, and **TypeScript**, connecting users with online trainers, and attracting 200+ monthly active users.
- Designed and implemented user notification system and training reservation features using React Hooks, **Firestore**, and Cloud Functions. Built and optimized **RESTful** APIs with **Express**, improving backend performance and scalability
- Implemented unit tests for frontend using **Jest** and React Testing Library, achieving 85% code coverage, reducing post-release bugs by 25%.

California Institute for Telecommunications and Information Technology

Jul. 2023 – Jun. 2024

Software Engineer Intern

Irvine, CA

- Developed and deployed a robust IoT monitoring system leveraging **React, Kafka**, and **Flask**, enabling real-time data visualization from 40+ sensor nodes and cameras.
- Built and optimized a multi-level React dashboard with **Material UI** and Chart.js, integrating live camera feeds, real-time sensor analytics, and dynamically routed pages. The intuitive interface improved usability, enhancing data accessibility by **75%** and empowering researchers with instant insights.
- Automated deployment and system updates by implementing **CI/CD** pipelines with GitLab Runners and **Docker**, streamlining software releases for **AWS EC2** instances and 15 Raspberry Pi devices.

Education

University of California, Irvine

Sep. 2022 – Jun. 2024

Master of Science in Computer Engineering, GPA: 3.84/4.0

Irvine, California

Wuhan University

Sep. 2017 – Jun. 2021

Bachelor of Engineering in Computer Science and Technology, GPA: 3.61/4.0

Wuhan, China

Publications

- Yutian Ren, Yuqi He, **Xuyin Zhang**, Aaron Yen, and Guann-Pyng Li, "A Cyber Manufacturing IoT System for Adaptive Machine Learning Model Deployment by Interactive Causality-Enabled Self-Labeling," *Machines*, Vol. 13, No. 4, p. 304, 2025.

Skills

Languages: JavaScript, TypeScript, Python, Java, C++, HTML/CSS, SQL, MATLAB

Frameworks: Tensorflow/Keras, React, Next.js, Node.js, Express.js, Redux, PostgreSQL, MySQL, Redis, MongoDB, Kafka

Tools: Kubernetes, Linux, Git, Vercel, Firebase, AWS, Docker, CI/CD, Postman
